Project Title: Simple Finance Tracker

Problem Statement

Many people struggle with budgeting, and most of the time, the problem is that they usually can't see what they're spending their money on. It can be because of multiple reasons, but it's often because they find it difficult to manage and keep track of their finances, so this is where our program comes in.

Project Description

This simple program allows people who struggle with managing their finances to keep track of their expenses, budget, and etc.

Objectives

- Help people track their expenses.
- Successfully help those struggling with budgeting.

Planned Features

- Allows the user to group each of their expenses into certain categories and remove old categories.
- For each category, the user can list each expense and their total cost.
- The user can also enter their budget.
- Calculates the combined total cost in each category.
- Displays all categories and expenses.
- Handles invalid inputs and warns when the user tries to pay for an expense that does not fit their budget. (Ex. Negative numbers, letters instead of actual numbers, etc.)

Planned input and output

Outputs

- Menu

- instruction prompts such as “Enter the category you would like to delete”

- Warnings such as “Invalid budget. Please try again”

- All the categories and items the user entered.

- All respective calculations

Inputs

- A float value for the budget.

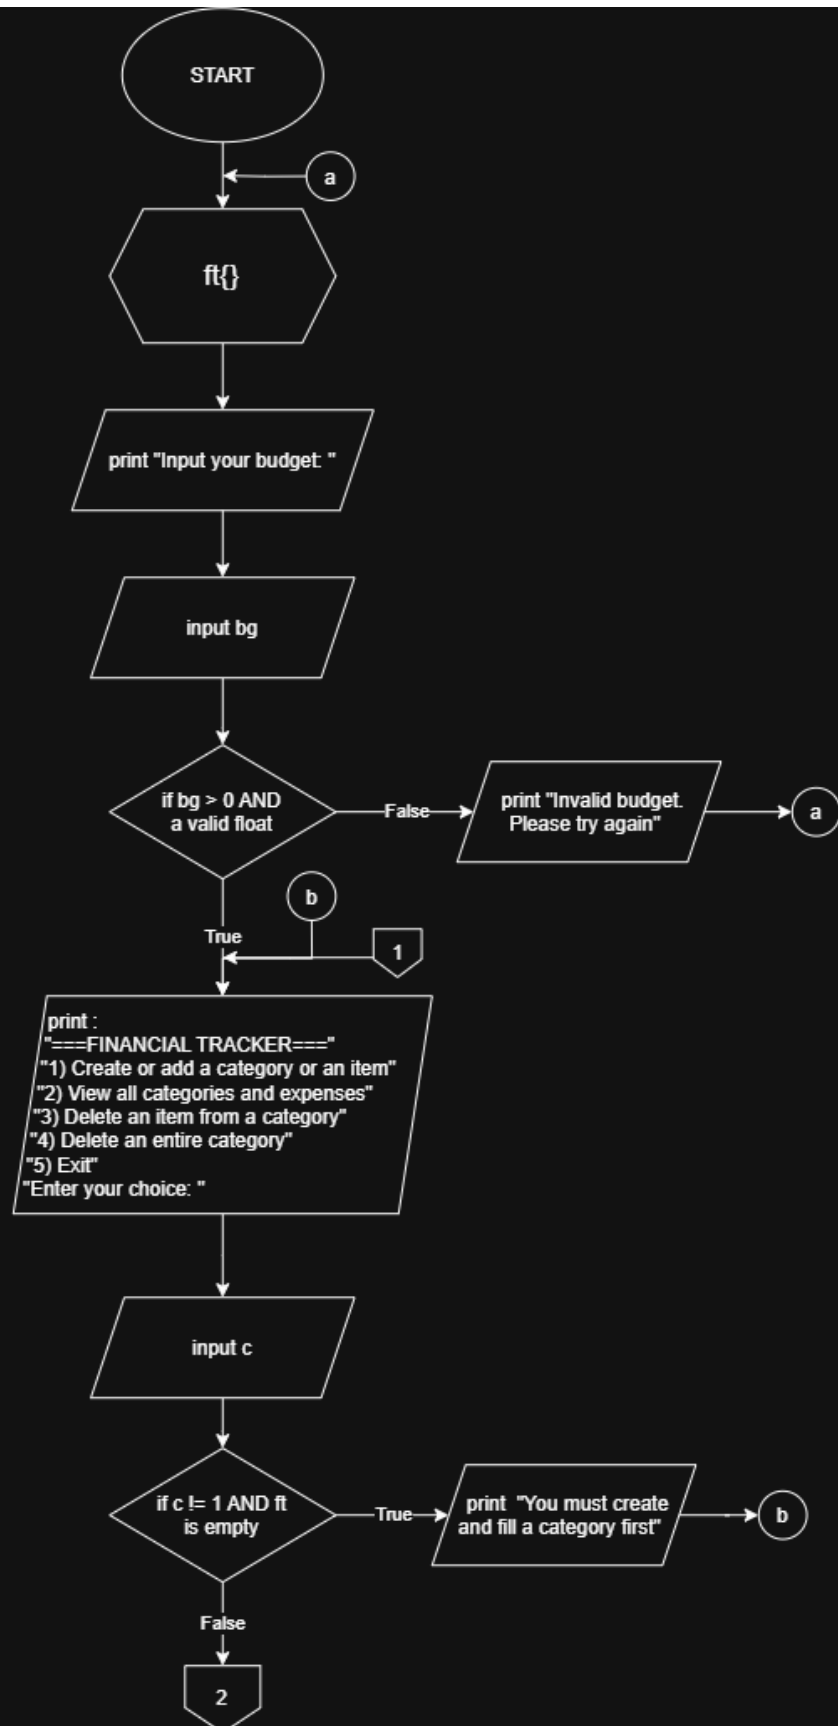

- The user’s choices for the menu.

- Each category the user entered.

- Each item and cost the user has entered.
